

# FAQs

# FAQs

## How much can I make?

\$125,000 or more your first year. You will become a fully licensed independent business. We give you the tools and connect you with customers. The average hourly rate for licensed drone operators is \$165 / hour. You can work as much or as a little as you choose, so it really is up to you.

## How long does it take to start earning?

Our success kit can be completed in as little as five weeks, with pilots able to finish in under three weeks. Passing the FAA certification exam is just the beginning. The second module teaches you how to unleash the power of the AD Cloud for your drone business. Both modules are included in the success kit.

Once you complete these modules successfully, it takes an additional four weeks to master an industry solution and another week to establish the business. So in as little as ten weeks (under eight weeks for pilots), you can start earning.

## Do I have to be a pilot to sign up?

No. The power of the AD Cloud, tailored for drone operations, makes it easy for anyone to establish a professional drone business. Connectivity is prevalent not just with flight operations but also with business details and objectives.

## What does it cost?

Our success kit is a nominal fee of \$999 (\$799 for pilots) that takes you through the first two stages of the process. In addition to obtaining your FAA drone license, you will have the world's most powerful UAV cloud at your disposal, AD's powerful marketing and business generation team, and an assigned territory that ensures plenty of opportunity.

## I don't have any experience with drones. Can I do this?

Yes. Our drones are designed to be operated by anyone. Our cloud unleashes the potential of drones through automation. Our online classes will clearly explain everything you need to know in an easy to understand format.

## I don't have any experience running a business. Can I do this?

Yes. If you are motivated to take control of your own future and be your own boss, you can do this! We at AD are entrepreneurs ourselves, and we are passionate about empowering individuals to oversee their own future. As such, you can count on us to give you the tools you need to be successful, as well as on-going support as your business grows. We only succeed when you succeed.

# FAQs

## What kind of business will I own?

Graduates will have their own Limited Liability Company (LLCs.) This structure was carefully chosen because it is amazingly simple to own, and it provides important legal protections for the owner. You don't have to know anything about LLCs. By the end of the FF program, you will have learned everything you need to own and run your own business.

## I'm not an entrepreneur. I don't want to deal with the hassle of owning I business. I just want to work as a drone operator. Is FF right for me?

Yes! We take care of everything on the business end. You have the freedom to go as big or as small as you wish. If you want, we can send you mission requests in your town and you choose which ones you will fly.

You need to be under an LLC to enjoy legal protections and tax benefits, but we will handle the details and explain everything along the way. It is no more complicated than driving for a ride sharing service.

## What are the fundamentals I am going to learn? Why don't I just learn on my own?

Simply put, you will learn what you need to stay safe and stay legal. Drones are not gadgets; they are aircraft that are heavily regulated. And when you start commercial operations, a higher degree of skill is required, which you learn from an experienced professional.

We will teach you how to operate a drone the right way. Plus, you will have access to the most sophisticated drone framework in the industry, the AD Cloud. As a FF graduate, AD will have your back.

## What's so special about this program?

Flight to the future is the only drone school that gets you hands-on experience by remotely overseeing a drone. This is a crucial piece of experience. It allows the program to be offered nationwide and provides you with the safety net that is required as you progress through your training – wherever you are located.

It follows our philosophy that drones are aircraft, operators are pilots and safety is first.

Because we require this step, AD is able to lease graduates of FF sophisticated equipment, provide advanced commercial training and offer insurance policies at deep discounts.

That means more money in your bank account.
